IMPLEMENT CODE TO RECOGNIZE TOKENS IN C

AIM:

To implement the program to identify C keywords, identifiers, operators, end statements like [], {} using C tool.

ALGORITHM:

- We identify the basic tokens in c such as keywords, numbers, variables, etc.
- Declare the required header files.
- Get the input from the user as a string and it is passed to a function for processing.
- The functions are written separately for each token and the result is returned in the form of bool either true or false to the main computation function.
- Functions are issymbol() for checking basic symbols such as () etc , isoperator() to check for operators like +, -, *, /, isidentifier() to check for variables like a,b, iskeyword() to check the 32 keywords like while etc., isInteger() to check for numbers in combinations of 0-9, isnumber() to check for digits and substring().
- Declare a function detecttokens() that is used for string manipulation and iteration then the result is returned from the functions to the main. If it's an invalid identifier error must be printed.
- Declare main function get the input from the user and pass to detecttokens() function.

PROGRAM:

```
#include<stdio.h>
  int main(){
    int count=0,k=0,i=0;
    char a[25];
    printf("Enter expression : ");
    fgets(a,25,stdin);
     while (a[i]!='\setminus 0')
       if(isalpha(a[i])){
          printf("%c - identifier\n",a[i]);
       else if(a[i]=='+' || a[i]=='-'||a[i]=='*'||a[i]=='/'){
          printf("%c - arithmetic operator\n",a[i]);
       else if(a[i]=='='){
          printf("%c - assignment operator\n",a[i]);
       else if(isdigit(a[i])){
          char b[k];
          while(isdigit(a[i])){
            b[k++]=a[i];
            i++;
          printf("%s - digit\n",b);
TAMILSELVAN A P – 210701283
```

```
\begin{array}{c} k=0;\\ i=i-1;\\ \\ \\ \\ i++;\\ \\ \\ \end{array}
```

OUTPUT:

```
[root@localhost-Live 210701282]# vi tok.c
[root@localhost-Live 210701282]# cc tok.c
[root@localhost-Live 210701282]# •/a.out
Enter
expression : a=b+c
a - identifier
= - assignment operator
b - identifier
+ - arithmetic operator
C - identifier
```

RESULT:
