DESIGN A DESK CALCULATOR USING LEX
TOOL

AIM:

To create a calculator that performs addition, subtraction, multiplication and division using lex tool.

ALGORITHM:
- In the headers section declare the variables that is used in the program including header files if necessary.
- In the definitions section assign symbols to the function/computations we use along with REGEX expressions.
- In the rules section assign dig() function to the dig variable declared.
- In the definition section increment the values accordingly to the arithmetic functions respectively.
- In the user defined section convert the string into a number using atof() function.
- Define switch case for different computations.
- Define the main () and yywrap() function.

PROGRAM:
```
%{
int op = 0,i;
float a, b;
%}
dig [0-9]+|([0-9]*)"."([0-9]+)
add "+"
sub "-"
mul "*"
div "/"
pow "^"
ln \n
%%
{dig} {digi();}
{add} {op=1;}
{sub} {op=2;}
{mul} {op=3;}
{div} {op=4;}
{pow} {op=5;}
{ln} {printf("\n The Answer :%f\n\n",a);}
%%
digi(){
if(op==0)
```

```
a=atof(yytext);
else{
b=atof(yytext);
switch(op){
case 1:a=a+b;
break;
case 2:a=a-b;
break;
case 3:a=a*b;
break;
case 4:a=a/b;
break;
case 5:for(i=a;b>1;b--)
a=a*i;
break;
}
op=0; } }
main(int argv,char *argc[])
{
yylex();}
yywrap()
{
return 1;
}
```

OUTPUT:

```
[root@localhost-live 210701283]# vi 283ex4.1
[root@localhost-live 210701283]# lex 283ex4.1
[root@localhost-live 210701283]# cc lex-yy-c
[root@localhost-live 210701283]# -/a.out
5*5

 The Answer : 25.000000

4+3

 The Answer : 7.00000

8-3

 The Answer : 5.000000

9/3

 The Answer : 3.000000
```

RESULT:
